Machine data analytics for Microsoft Azure

Turn Microsoft Azure data into business, operational and security insights

Moving to the cloud does not require sacrificing visibility or control over your infrastructure and applications. New tools and services designed for the volume, variety and velocity of cloud-generated data provide real-time operational and security visibility into your modern applications deployed to Microsoft Azure.

You moved your application to Azure because it was the right platform to support your drive to innovate and compete. You need to be able to offload the data center management headaches to someone else so you can focus your time, energy and innovation on building a great customer experience. So, after choosing a cloud platform like Azure, why would you settle for analytics solutions that don't measure up?

The Sumo Logic Apps for Azure — Azure Audit, Azure Network Watcher Azure SQL, Azure Active Directory, and Azure Web Apps - collect valuable diagnostic, performance, audit, and security data for your infrastructure and applications running in Microsoft Azure.
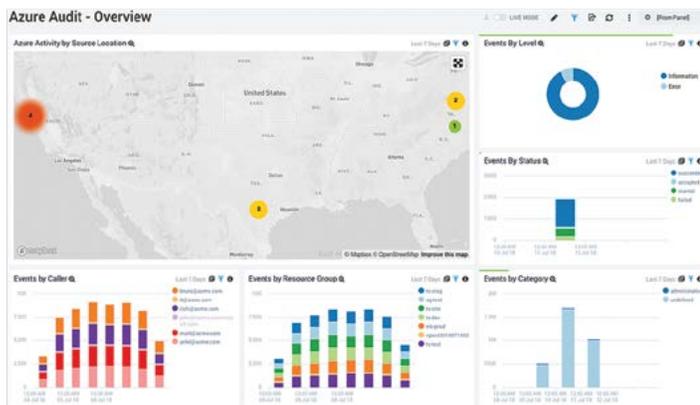

Accelerating cloud migration: Migrate to Azure faster and with confidence by mitigating application performance risk via powerful automated metrics and log files analytics.

Visibility across hybrid environments: Visualize and run operations and security on your workloads in real time, identify issues and expedite root-cause analysis across Azure, other clouds, and on-premise environments, from the infrastructure and up to the application stack.

Strengthening security and compliance: Monitor user access, platform configurations and changes across all Azure and on-premise workloads and generate audit trails to demonstrate compliance (e.g. PCI, HIPAA, etc.). Diagnostic and performance information across the various Sumo Logic Applications for Azure is collected from Azure Monitor, Azure Event Hub, and Azure Storage. Audit data is collected from the Azure Insights Events API.
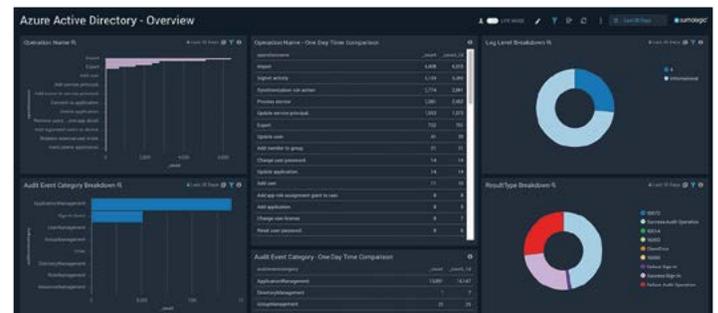

About Sumo Logic

Sumo Logic is the leading cloud-native, machine data analytics platform, that delivers real-time, continuous intelligence across the application lifecycle and stack.
