
Today's current on-premise solutions come with enormous operational cost, complexity, and scalability problems. Consequently, Windows Server log data is often never collected, or collected but never analyzed.

The Windows Log Data Challenge

Windows Server logs contain valuable information about your Windows Server infrastructure, including performance, uptime, access, security, processes, and more. Additionally, Windows Server logs contain critical information required to troubleshoot and optimize your Windows Servers, including finding root cause of failures, diagnosing system issues, uncovering security incidents, and identifying performance bottlenecks.

Given the value of the information stored in Windows Server logs, both IT and business professionals are becoming increasingly aware of the importance of extracting the right insight from their Windows Server log data. However, while extracting insight from Windows Server log data has never been more crucial, it has also never been more difficult. Today's current on-premise solutions come with enormous operational cost, complexity, and scalability problems. Consequently, Windows Server log data is often never collected, or collected but never analyzed.

Sumo Logic for Windows Logs

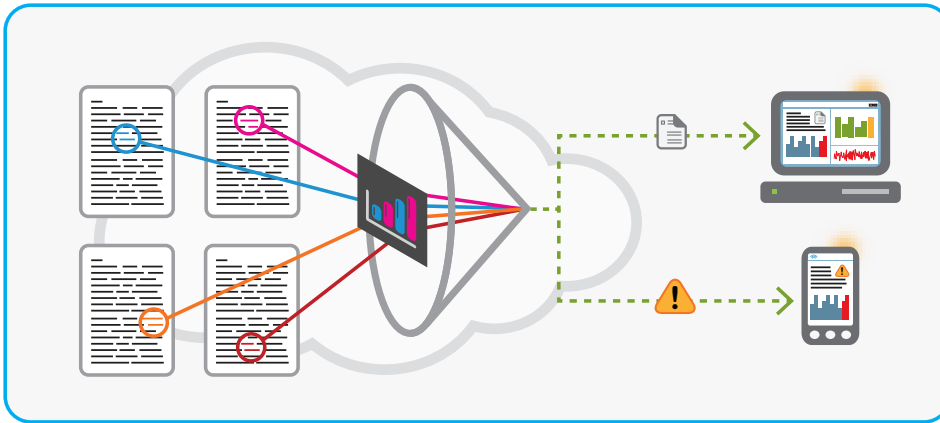

Sumo Logic's real-time indexing engine processes and manages Windows Server log data with near-zero latency.

By using Sumo Logic to analyze Windows Server logs, enterprises can improve their business infrastructure operations by optimizing system performance and uptime. Additionally, enterprises can reduce critical application and infrastructure downtime by quickly diagnosing and resolving Windows Server issues before they impact their customers.

Below is a quick snapshot of what customers can do in Sumo Logic with Windows Server logs:

- + **Collect and Centralize Your Windows Server Logs:** Effortlessly collect and centralize logs and metrics from your Windows Servers, including application, system, security, custom events, and more.
- + **Troubleshoot Your Windows Server Farms:** Find issues related to server failures and issues and correlate Windows events with events generated by applications, security devices, networks and other IT infrastructure. Use our Windows Log Parser to extract granular information embedded inside Windows events.
- + **Monitor Your Windows Servers:** Proactively measure and monitor important Windows Server statistics such as disk, memory, and CPU utilization, error counts, running processes, access and other metrics to keep your Windows Servers effectively utilized but not overtasked.

Transform Windows Logs into IT and Business Insights

The Sumo Logic Advantage

To solve the log management challenge, Sumo Logic has developed the first true next-generation log management and analytics solution — an enterprise-class, real-time, petabyte-scale solution, delivered as a cloud-based service. With this approach, Sumo Logic is fundamentally redefining the process by which IT and business harness the value of machine data.

Customers using the Sumo Logic service benefit from a number of unique capabilities:

Operational Ease: Sumo Logic can be deployed in as little as 15 minutes, with zero operational overhead. As a cloud-based service, Sumo Logic handles all operational burden, reducing Total Cost of Ownership as well as freeing up customers' resources to focus on critical business and IT issues.

Big Data Scalability: Sumo Logic's patented Elastic Log Processing™ is a petabyte-scale indexing and analysis engine designed specifically for Big Data. Sumo Logic delivers superior scalability where on-premise solutions fail.

Advanced Analytics: Through patent-pending LogReduce™ and PushAnalytics™ technologies, Sumo Logic proactively discovers behaviors and patterns hidden in massive amounts of machine data and alerts customers in real-time, delivering both IT value and business insight.

Use Sumo Logic for Free

- + **Easy to deploy:** Sumo Free enables you to collect and analyze logs in minutes with no hardware or storage to manage
- + **Enterprise-level functionality:** Sumo Free contains all the features of our enterprise-class solution
- + **Perpetual usage:** Sumo Free is perpetually free for up to 3 users, and offers the ability to send 500MB of data per day and retain for 7 days (total 3.5GB of data). To send additional data, add more users, or retain data for a longer period of time, easily upgrade to our enterprise version.
